CONTENTS

Effect of the Anion on the Sorption of Potassium by Some Humic and Hydrol Humic Latosols. A. S. Ayres and H. H. Hagihara 1
Loess in New Jersey Soil Materials. J. C. F. Tedrow and Paul MacClintock 19
Relation of Water-Soluble Boron in Illinois Soils to Boron Content of Alfalfa. C. H. Stinson 31
Removing Interfering Metals in the Versenate Determination of Calcium and Magnesium. K. L. Cheng, S. W. Melsted, and R. H. Bray 37
Effect of Ammoniation on Availability of Phosphorus in Superphosphates as Indicated by Plant Response. W. E. Martin, J. Vlamis, and J. Quick 41
Residual Effects of Superphosphate Application on Soil Phosphorus Level and Growth of Crimson Clover as Measured by Yield and Phosphorus Uptake. Allan B. Prince 51
Residual Phosphorus of Heavily Fertilized Acid Soils. E. J. Rubins 59
Differential Behavior of Potassium Metaphosphate and Sulfate Incorporations in Soils. W. H. MacIntire, W. M. Shaw, and B. Robinson 69
Books 81
Description of a Montalto Soil in Maryland. Dorothy Carroll 87
Effect of Lime on Availability of Labeled Phosphorus of Phosphates in Rutlege Fine Sand and Marlboro and Carnegie Fine Sandy Loams. J. R. Neller 103
Response of Evergreen Sweet Clover and Cotton to Phosphorus Applications on Houston Black Clay. L. C. Kapp, R. J. Hervey, J. R. Johnston, and J. C. Smith 109
Nitrogen Fertilization as Related to the Availability of Phosphorus in Certain California Soils. O. A. Lorenz and C. M. Johnson 119
Tillage Tests on Texas Blacklands. W. Derby Laws 131
Effect of Soil Fumigation on Growth and Chemical Composition of Citrus Plants. J. P. Martin, D. G. Aldrich, W. S. Murphy, and G. R. Bradford 137
Ionization of Soils and Soil Colloids: IV. Humic and Hymatomelanic Acids and Their Salts. C. E. Marshall and N. Patnaik 153
Books 167
Ammonium Fixation and Availability in Vermiculite. F. E. Allison, E. M. Roller, and Janet H. Doetsch 173
Experimental Confirmation of Hydrometer Theory. Paul R. Day 181
Movement and Equilibrium of Water in Heterogeneous Systems with Special Reference to Soils. Philip F. Low and John M. Deming 187
Moisture Content of Small Stone in Soil. T. S. Coile 203
Acidoid Behavior of Charcoal in Relation to Soil Properties. Balwant Rai Puri, M. L. Lakhanpal, and Balvir Verma 209
Effects of High Copper Content of Sandy Soil on Growth of Citrus Seedlings. Walter Reuther and Paul F. Smith 219
Microbiological Examination of Soils of Arno Atoll. I. L. Stevenson 225
Chemical Properties of Alkali Soils in Mesilla Valley, New Mexico. C. W. Chang 233
Material Removed by Jeffries' Magnesium-Ribbon-Potassium-Oxalate Method for Cleaning Soil Particles. H. M. Rice and R. Levick 243
Books 247
News Notes 251
Notes on Editorial Policy and Preparation of Papers for Soil Science 253
An Electrical Resistance Network for Solving Drainage Problems. James N. Luthin 259
Standard Adsorption Potentials of Water Vapor on Soil Colloids. J. Rex Goates and Conrad V. Hatch 275
Arsenite Oxidation in Soil. J. H. Quastel and P. G. Scholefield 279
Molybdenum Content of Soils. W. O. Robinson and L. T. Alexander 287

Exudation Pressure in Roots of Tomato Plants under Humid Conditions. E. L. Breazeale and W. T. McGeorge 293
Calcium Uptake by Tobacco from Band Applications of Fertilizer Materials. James M. Blume and N. S. Hall 299
Influence of Subsoil Shattering and Fertilization on Sugar Cane Production and Soil Infiltration Capacity. M. B. Martínez and M. A. Lugo-López 307
Fungitoxins in the Soil: I. Historical. D. G. Hessayon 317
Books 329
Notes 332
Soil Mineralogy as an Index to the Trace-Element Status of Some Australian Soils. E. R. Graham 333
Weathering of Glacial Soil Material. J. C. F. Tedrow and A. S. Wilkerson 345
Response of Sugar Beets to Peroxide Fertilization and Its Relationship to Oxygen Diffusion. D. Wiersma and M. M. Mortland 355
Transition of Phosphite to Phosphate in Soils. Fred Adams and John P. Conrad 361
Availability of Fixed Ammonium in Soils Containing Different Clay Minerals. F. E. Allison, Janet H. Doetsch, and E. M. Roller 373
Acid Soil Infertility as Related to Soil-Solution and Solid-Phase Effects. James Vlamis 383
Fungitoxins in the Soil: II. Trichothecin, Its Production and Inactivation in Unsterilized Soils. D. G. Hessayon 395
Books 405
Note 409
Clay Mineral Types and Related Soil Properties in Puerto Rico. Fernando Abruña and R. M. Smith 411
Some Aspects of the Chemistry of Cobalt in Soils. Dilip K. Banerjee, Roger H. Bray, and S. W. Melsted 421
Copper Status of New Jersey Soils. M. R. Pack, S. J. Toth, and F. E. Bear 433
Cation Uptake by Plants as Affected by an Applied Potential. E. L. Breazeale and W. T. McGeorge 443
Relation of Soil and Fertilizer Potassium to Dry Matter Content and Yield of Potatoes. G. L. Terman, P. N. Carpenter, and C. E. Cunningham 449
Influence of Organic Mulches on Reaction and Exchangeable Calcium Content of Soil. Robert N. Goodman 459
Available Moisture Capacities of Soils as Affected by Addition of Polyelectrolyte Soil Conditioners. Doyle B. Peters, Robert M. Hagan, and Geoffrey B. Bodman 467
Factors that Influence Clod Structure and Erodibility of Soil by Wind: I. Soil Texture. W. S. Chepil 473
Books 485
Index 487

SUBJECT INDEX

Acid soil infertility, relation to soil-solution and solid-phase, 383–394.
Acidification—
  effects on citrus, 143.
  sulfur, 126.
Acidoid—
  behavior of charcoal, 209–218.
  values of various charcoals, 211.
Adsorption—
  arsenite, 280.
  potentials—
    theory, 276.
    water vapor, on soil colloids, 275–278.
Alfalfa—
  boron content, 31–36.
  distribution of boron in various parts, 35.
Alkali soils—
  chemical properties of New Mexico, 233–242.
  water-soluble ions in, 238.
Ammoniation, effect on availability of phosphorus, 41–50.
Ammonium—
  availability of fixed, in soils of different clay minerals, 373–381.
  fixation and availability in vermiculite, 173–180.
  nitrification of fixed, 179.
Anion—
  effect on potassium sorption, 1–18.
  retention, 11.
Arsenite—
  metabolism, 283.
  nature, 279.
  oxidation in soil, 279–288.
Azotobacter in Arno Atoll, 229.
Books—*see* end of letter B.
Boron—
  distribution in alfalfa, 35.
  in soils, 33.
  water-soluble in soil, and content of alfalfa, 31–36.

Calcium—
and copper contents of crops, 440.
determination by Versenate, 37–40.
effect on cobalt, 427.
influence of organic mulches, 462.
leaching losses, 73.
source in plants, 303.
uptake from band applications, 299–306.
Cation—
activity of organic fractions, 160.
uptake and applied potentials, 443–448.
Charcoal—
acidoid behavior, 209–218.
area surface, 217.
decomposition of calcium carbonate, 212.
oxidation of surfaces, 215.
properties prior to oxygen exposure, 210.
reactivities, 217.
Citrus—
copper effects, 219–224.
major element composition, 147.
minor element composition, 141, 221.
soil fumigation effects, 140.
Clay mineral types in Puerto Rico, 411–420.
Clod structure, factors affecting, 474.
Cobalt—
chemistry in soils, 421–431.
effect of calcium, 426.
removed by extracting solutions, 424.
Copper—
content of soils, 434.
response of crops, 431.
status of New Jersey soils, 433–441.
Corn yields and tillage, 132.
Crimson clover—
content of phosphorus, 54.
residual effects of phosphorus, 51–58.
Differential thermal analysis of Montalto soil, 97.
Drainage—
hydraulic head distribution, 271.
land underlain by permeable stratum, 270.
Drift sheets—
classification, 345.
soils on, 352.
Electrical resistance network—
accuracy, 269.
boundary conditions, 263.
description, 261.
extension, 268.
Erodibility and clod structure, 473–483.
Exchange—
capacity, Puerto Rico soils, 413.
cations, Australian soils, 339.
Exudation pressure—
apparatus for measuring, 294.
roots of tomato plants under humid conditions, 293–298.
Fertilizer, effects on—
seed cotton, 134.
sugar cane yields, 312.
Free ferric oxide—
color of soil materials, 347.
Puerto Rico soils, 413.
Fumigation, effect on citrus plants, 137–150.
Fungitoxins—
historical review, 317–327.
thermostable, 401.

Fungitoxins—*continued.*
trichothecin, production and inactivation in unsterilized soils, 395–404.
Glacial soil material, weathering, 345–353.
Heavy minerals in soils of Australia, 336
Humic acid—
cation activities, 163.
titration curves, 159.
Hydrometer theory, confirmation, 181–186.
Hymatomelanic acid—
cation activities, 162.
titration curves, 159.
Infiltration rates in sugar cane soils, 313.
Ionization of soil and soil colloids, 153–166.
Latosols—
composition, 2.
humic and hydrol humic, 1–18.
Lime—
and availability of phosphates, 103–108.
effect on—
forms of phosphorus, 107.
growth and composition of citrus, 222.
phosphorus content of oats, 105.
soil pH, 105.
Loess—
description, 20.
in New Jersey soil materials, 19–31.
mechanical composition, 24.
mineralogy, 26.
profile, 23.
Magnesium—
determination by Versenate, 37–40.
leaching losses, 76.
Mechanical composition of soils by hydrometer and pipette methods, 183.
Methods—
cleaning soil particles, 243–246.
electrical resistance network solving drainage problems, 259–273.
mechanical composition of soils, 183.
Versenate determination of calcium and magnesium, 37–40.
Microorganisms—
distribution in soils, 227.
organisms for phosphate conversion, 366.
oxidation of ammonia, 128.
phosphite-phosphate transitions, 361–371.
soils of Arno Atoll, 225–232.
Mineralogy—
index to trace element status of soils, 333–343.
loess, 26.
Montalto soil, 89.
Moisture—
buildup in soils at different relative humidities, 296.
content of small stone, 203–208.
contents and tillage practices, 132.
equivalents and—
erodibility, 475.
soil conditioners, 469.
retention curves, 414.
Molybdenum content of soils, 287–292.
Nitrification—
and clay minerals of soils, 378.
fixed ammonium ions, 179.
studies, 375.
Nitrogen—
ammonium forms, 119.
and phosphate availability, 119–130.
effect on—
crops, 120–121.
forms of phosphorus, 124.
Organic mulches, effect on calcium content of soil, 459–466.
Oxidation of arsenite in soil, 279–288.
Oxygen diffusion—
noncapillary pore space, 357.
rates, 359.
Peroxide fertilization—
oxygen diffusion, 358.
response of sugar beets, 355–360.
pH—
and exchangeable sodium percentage, 239.
arsenite oxidation, 281.
effect of organic mulches, 460.
Phosphate—
content of Australian soils, 339.
phosphite transition, 361–371.
Phosphite—
microbes and, 365.
nature, 363.
transition to phosphate, 361–371.
Phosphorus—
ammonium-fluoride-soluble, in soils, 55.
availability in soils, 44, 46, 51–58, 103.
content of—
crimson clover, 54.
oats, 105.
ryegrass, 62.
Sudan grass, 64.
sweet clover, 114.
effect of—
ammoniation on availability, 41–50.
nitrogen source, 119–130.
placement, 113.

fractions in soils, 63, 107.
metaphosphates, 69, 106.
residual effects, 51–58, 59–68.
response of sweet clover to, 109.
transition of phosphite to phosphate, 361–371.
water-soluble, 48.
Potassium—
behavior of carriers, 69–80.
effect on—
anion on sorption, 1.
fertilizers on retention, 7.
losses by leaching, 4.
retention of salts, 5.
yields of potatoes, 449–458.
exchangeable, 9.
fixation, 11.
metaphosphate, 69.
recoveries, 72.
replacement by other cations, 13.
Radioisotopes—
Ca45, 299.
Co60, 421.
P32, 103, 109.
Soil conditioners and available moisture, 467–471.
Soil series, analyses, descriptions of, or experiments with—
Aiken, 43; Alamance, 204; Aledo, 39, 422; Alma, 33; Annandale, 435; Arbuckle, 469; Atterberry, 33; Ava, 33; Barnes, 277; Berks, 436; Bermudian, 435; Blanford, 244; Bluford, 33; Brazito, 233; Burnstown, 244; Caribou, 61; Carnegie, 103; Carrington, 277; Catalina, 413; Cecil, 203, 277; Cialitos, 414; Cisne, 33; Clarence, 374; Clinton, 33; Collington, 61, 435; Colts Neck, 435; Coto, 417; Cowden, 33; Delano, 121; Douglas, 33; Dublin, 469; Dutchess, 469; Egbert, 43; Elizabethtown, 422; Eustas, 220; Evesboro, 435; Exeter, 121; Fullerton, 71; Georgeville, 204; Gila, 233; Granville, 203, 244; Guelph, 244; Hanford, 139; Harpster, 373; Harrison, 33; Hartsburg, 422; Hartsells, 71; Hazen, 435; Herndon, 204; Herrick, 33; Hesperia, 119; Hickory, 33; Hoosic, 435; Houston, 109, 132, 422; Hoylestown, 33; Illiopolis, 33; Imperial, 233; Ipava, 33; Iredell, 204; Jacana, 415; Joliet, 422; Kewanee, 39; Keyport, 436; Lakeland, 220; Lakewood, 435; Laval, 244; Lawrenceville, 435; Linne, 43; Marlboro, 103; Matanzas, 417; Matapeake, 435; Mayodan, 203; Meloland, 43; Miami, 277, 374; Montalto, 87; Moyock, 61; Mucara, 415; Muscatine, 33; Nipe, 414; Norfolk, 305; Norton, 435; Oblong, 39; O'Fallon, 33; Oquawka, 33; Orange, 204; Orangeburg, 53; Orlando, 220; Pachappa, 374; Palmyra, 435; Pella, 33; Ramona, 146; Ridgeville, 33; Rockaway, 435; Rocklin, 43; Rockport, 435; Rutlege, 103; Sable, 33; San Joaquin, 43, 363; Santa Isabel, 415; Sassafras, 61, 435; Seymour, 459; Squires, 435; Stockton, 469; Tallula, 33; Tioga, 244; Tirzah, 204; Toledo, 39; Traver, 374; Utuado, 415; Vira, 307; Virden, 33; Washington, 435; Whippany, 435; White Stone, 203; Yolo, 121, 139, 374, 467.
Soil solution—
and acid soil infertility, 383–394.
artificial, 389.
composition, 390.
displacement, 388.
growth of barley in, 387.
Stone—
moisture contents, 205.
permanent wilting percentage, 205.
size and water available to plants, 206.
Subsoil shattering, effect on sugar cane yields, 307–316.
Sulfates, leaching losses, 77.
Sulfur, soil acidification, 126.
Superphosphate, residual effects, 51–58.
Sweet clover—
evergreen, 109.
uptake of phosphorus from fertilizers, 111.
Tillage—
fertilizer effects, 134.
season effects, 133.
tests on Texas blacklands, 131–136.
Trace element status of Australian soils, 333–343.
Trichothecin—
effect of other organisms, 399.
growth, 397.
production and inactivation, 395–404.

Vermiculite—
exfoliated, 177.
fixation of ammonium ions, 173–180.
release of nitrogen, 175.
Versenate—
influence of iron and manganese, 38.
method for calcium and magnesium, 37–40.
Water—
effect of stone size, 206.
movement and equilibrium in heterogenous systems, 187–202.
Wilting percentage, permanent, of small stones, 205.
X-ray spectrometer—
analysis Montalto soil, 97.
studies of Australian soils, 335.

CONTENTS

Sodium Symposium 1

Factors Affecting Crop Response to Sodium Applied as Common Salt on Michigan Muck Soil. Paul M. Harmer, Erwin J. Benne, Winston M. Laughlin, and Cornelia Key 1

Effects of Applications of Sodium in Fertilizer on Yields and Composition of the Cotton Plant. H. P. Cooper, W. R. Paden, and M. M. Philippe 19

Influence of Sodium on Yield and Quality of Cotton Lint and Seed. J. D. Lancaster, W. B. Andrews, and U. S. Jones 29

Response of Nine Economic Plants to Fertilization with Sodium. E. Truog, K. C. Berger, and O. J. Attoe 41

Interaction of Sodium and Potassium on Yield and Cation Composition of Selected Crops. W. E. Larson and W. H. Pierre 51

Effect of Sodium Fertilization on Yield and Cation Content of Some Field Crops. J. T. Cope, Jr., R. Bradfield, and M. Peech 65

Effects of Sodium Fertilizers on Yield of Cotton. J. G. Marshall and M. B. Sturgis 75

Sodium and Potassium Requirements of Pangola and Other Pasture Grasses. Nathan Gammon, Jr. 81

Response of Oats to Na and K on Norfolk Sandy Loam at Two Residual K Levels. Ralph L. Wehunt and W. O. Collins 91

Electrochemical Properties of Hydrogen Clays from Several Indian Soils in Relation to their Mineralogical Makeup. B. B. Roy and S. C. Das 97

Nitrification in an Orchard Soil under Three Cultural Practices. I. L. Stevenson and F. E. Chase 107

Zinc Status of New Jersey Soils. S. Woltz, S. J. Toth, and F. E. Bear 115

Comparison of Oxgall, Crystal Violet, Streptomycin, and Penicillin as Bacterial Growth Inhibitors in Platings of Soil Fungi. A. Bakerspigel and J. J. Miller 123

Anisotropy and Measurement of Air Permeability of Soil Clods. M. F. De Boodt and Don Kirkham 127

The Liquid-Vapor Interface in the Ideal Soil. Willard Gardner and John Hale Gardner 135

Changes in Air-Water Relationships Due to Structural Improvement of Soils. Vernon C. Jamison 143

Use of Ca45 Labeled Quenched Calcium Silicate Slag in Determination of Proportions of Native and Additive Calcium in Lysimeter Leachings and in Plant Uptake. Donald E. Davis, W. H. MacIntire, C. L. Comar, W. M. Shaw, S. H. Winterberg, and H. C. Harris 153

Books 165

News Notes 172

Effect of Organic Anions and Sugars on Phosphate Precipitation by Iron and Aluminum as Influenced by pH. Donald B. Bradley and Dale H. Sieling 175

Aggregation of Colloidal Clay from Hesperia Sandy Loam as Affected by Univalent and Calcium Ions. A. P. Mazurak 181

Effect of Chloride Versus Sulfate Ions on Nutrient-Ion Absorption by Plants. A. E. Kretschmer, S. J. Toth, and F. E. Bear 193

Amino Nitrogen of Soils and of Certain Fractions Isolated from Them. F. J. Sowden and Doreen I. Parker 201

Diffusion of Ethylene Dibromide in Soils. W. J. Hanson and R. W. Nex 209

Effect of Season, Phosphate, and Acidity on Plant Growth in Arsenic-Toxic Soils. N. R. Benson 215

Flood-Fallowing for Eradication of *Fusarium Oxysporum f. Cubense*: I. Effect of Flooding on Fungus Flora of Clay Loam Soils in Ulua Valley, Honduras. R. H. Stover, N. C. Thornton, and V. C. Dunlap 225

Relationship Between Air and Water Permeabilities in Porous Media. N. Collis-George 239
Sulfur Oxidation in Four Soils as Influenced by Soil Moisture Tension and Sulfur Bacteria. U. S. Moser and R. V. Olson 251
Microflora of the Rhizosphere of the Pineapple Plant. D. E. Contois 259
Cobalt Status of New Jersey Soils and Forage Plants and Factors Affecting the Cobalt Content of Plants. A. Clyde Hill, Stephen J. Toth, and Firman E. Bear 273
Effects of Various Soil Exchangeable Cation Ratios on Growth and Chemical Composition of Citrus Plants. J. P. Martin, R. B. Harding, and W. S. Murphy 285
Use of an Ion-Exchanger for Determining Available Phosphorus in Soils. Jørgen Møller and Thorkil Mogensen 297
Kinetics of Ion Exchange Between Two Adsorbents: I. Monovalent Ion Systems. C. Krishnamoorthy and A. D. Desai 307
Books 317
Oscar Conrad Magistad (Obituary) 321
Comparison of Biological Tests for Assaying Fertility of Punjab Soils. A. Wahhab and A. S. Bokhari 323
Mechanisms Responsible for Retention of Manganese in the Colloidal Fraction of Soil. Glen A. Hemstock and Philip F. Low 331
Exchangeable and Nonexchangeable Potassium as Indexes to Yield Increases and Potassium Absorption by Corn in the Greenhouse. G. W. Schmitz and P. F. Pratt 345
Absorption by Sugar Cane of Phosphorus from Tagged Superphosphate Added to a Phosphorus-Fixing Latosol. J. A. Bonnet and A. Riera 355
Influence of Atmospheric Humidity on Root Growth. Edward L. Breazeale and W. T. McGeorge 361
Afghan Alkali Soil and Its Improvement. G. F. Hauser 367
An Improved Type of Soil Hydrometer. George John Bouyoucos 377
Calcium-Potassium Interactions in Soils and Plants: I. Lime-Induced Potassium Fixation in Mardin Silt Loam. E. T. York, Jr., Richard Bradfield, and Michael Peech 379
Factors that Influence Clod Structure and Erodibility of Soil by Wind: II. Water-Stable Structure. W. S. Chepil 389
Books 401
News Notes 404
Phosphorus Requirements of Transplanted Tomatoes on Heavy Soils. Charles Y. Arnold 405
Nickel Status of New Jersey Soils. L. I. Painter, S. J. Toth, and F. E. Bear 421
Nature of the Clay Fractions of Some Soils in Florida. J. G. A. Fiskel and S. B. McCaleb 431
More Durable Plaster of Paris Moisture Blocks. George John Bouyoucos 447
Adsorption of Water Vapor: I. Soils at 25°C. H. D. Orchiston 453
Soils of the Palouse Loess: I. The Palouse Catena. Frederick B. Lotspeich and Henry W. Smith 467
Calcium-Potassium Interactions in Soils and Plants: II. Reciprocal Relationship Between Calcium and Potassium in Plants. E. T. York, Jr., Richard Bradfield, and Michael Peech 481
Index 493

SUBJECT INDEX

Adsorption—
  isotherms, 456.
  water vapor, 457.
Aggregation—
  cation content and, 185.
  effect of univalent and calcium ions, 181–192.
  stability at various times, 183.
Air permeability—
  in porous media, 239–250.
  measurement in soil clods, 127–134.
  method for, 127.
Air-water relationships—
  changes due to structural improvement, 143–152.
  effect of—
    aggregate stabilization, 147.
    clay, 146.
    organic matter, 145.
    soil settling, 146.
Alkali—
  composition of, 368.
  crop yields from, 373.
  effect of gypsum, 371.
  soils of Afghan and improvement, 367–375.
Amino—
  acids in hydrolyzate of humic acids, 204–206.
  nitrogen of soils, 201–208.
Anisotropy and measurement of air permeability, 127–134.
Arsenate toxicity—
  effect of—
    barley, 219.
    season, 218.
  interrelations of acidity and phosphate, 219.
Arsenic—
  plant growth on soils with toxic supplies, 215–224.
  total and extractable in soils, 221.
Autoradiographs, soybeans containing—
  Co60, 279.
  Zn65, 125.
Bacteria of inner and outer rhizosphere, 264–269.
Bacterial inhibitors in soil plating, 123–126.
Biological tests—
  assays of soil fertility, 323–330.
  comparison of, 327.

BOOKS

Adsorption, Dynamical Character of, 166.
Ahlgren, H. L. *See* Delorit, R. J.
Along the Great Rivers, 401.
Annual Review of Biochemistry, 401.
Annual Review of Plant Physiology, 317.
Arnon, D. I. (Editor) Annual Review of Plant Physiology, vol. 4, 317.
Aten, A., Faunce, A. D., and Ray, L. R. (Editors) Equipment for the Processing of Long Vegetable Fibers, 402.
Azaleas and Camellias, 165.

Wolfe, T. K., and Kipps, M. S. Production of Field Crops, ed. 4, 319.
Wood, Chemical Processing of, 165.
Years in My Herb Garden, 172.

Calcium—
absorption by alfalfa, 485
content of alfalfa, 486.
potassium interrelationships, 481-491.
uptake by crops, 159.
use of Ca45 to measure movement and uptake, 153-163.
Chloride—
content of crops, 8-9.
effect of varying levels on crop yields, 197.
versus sulfate on nutrient-ion absorption, 193-200.
Clays—
cation-exchange capacity, 99.
composition of Indian, 100.
diffraction patterns, 435.
electrochemical properties, 97-106.
fractions, nature of Florida soils, 431-446.
manganese retention by, 331.
titration curves, 102-103.
viscosity curves, 102-103.
Cobalt—
content of—
forage plants, 275.
soils, 276.
effect of lime on, 279.
status of soils and plants of New Jersey, 273-284.
Cotton—
composition, 26.

Cotton—continued
quality and sodium fertilization, 36.
response to potassium applications, 21.
yields and composition, as affected by sodium, 19–28, 29–40, 75–81.
Crystal violet as bacterial inhibitor, 125.
Diffusion—
effect of—
moisture content, 211.
porosity, 211.
ethylene dibromide in soils, 209–214.
Ethylene dibromide—
decomposition, rate of, 213.
diffusion in soils, 209–214.
Exchangeable cations—
ratios and growth of citrus, 285–295.
sodium, *see* Sodium, Potassium.
Filamentous fungi of pineapple rhizosphere, 270.
Fungus flora—
changes due to floodings, 229.
flood-fallowing for eradication, 225–238.
of pineapple rhizosphere, 263–270.
Grasses, sodium and potassium requirements, 81–90.
Gypsum, effect on—
potassium content of crops, 484.
yields, 484.
Ion—
balance in plants, 194.
exchange—
derivation of equations for, 308.
equation of reaction rates, 311.
kinetics between two adsorbents, 307–316.
exchangers for determining available phosphorus, 297–306.
Lime, effect on—
cobalt contents of crops, 279.
crop yields, 482.
nitrification, 110.
potassium content of alfalfa, 482.
potassium fixation, 379–387.
zinc fixation, 117.
Liquid-vapor interface—
in ideal soil, 135–142.
with closely packed spheres, 136.
Lysimeters to measure outgo of calcium, 156.
Magistad, O. C., obituary note, 321.
Manganese retention—
factors affecting—
organic matter, 340.
oxidation, 336.
pH, 334.
mechanisms, 331–343.
Mechanical analysis, improved hydrometers for, 377–378.
Methods—
air permeability in soil clods, 127–134.
available phosphorus in soils, 297–306.
Minor elements, effect on crops on muck soil, 7.
Mitscherlich equation, phosphorus requirements, 406.
Moisture—
blocks, 447–451.
diffusion of soil fumigants, 211.
oxidation of sulfur, 253.
tension curves, 252.
Nickel—
content of—
plants, 423, 425.
soils, 422.
status of New Jersey soils, 421–429.
Nitrification—
effect of lime on, 110.
orchard soils and cultural practices, 107–114.
rate curves, 109.
Nitrogen—
available in soil, 326.
distribution in organic matter fractions, 204.
Organic matter—
manganese retention by, 339.
treatment with various chemicals, 203.
Oxgall as bacterial inhibitor, 125.
Palouse catena—
mineral content, 477.
soil of, 467–480.
Penicillin as bacterial inhibitor, 125.
Phosphate—
arsenic toxicity, 219.
determination, use of ion-exchangers, 297–306.
effect on zinc fixation, 117.
precipitation, 176.
replacement by anions, 175–180.
Phosphorus—
absorption by sugar cane, 355–359.
available in soil, 304, 326, 408.
crop yields, and soil forms of, 411.
requirements, transplanted tomatoes, 405–419.

Potassium—
availability of forms, 483.
available in soil, 326.
content of—
cotton, 26.
various crops, 8–9, 95, 482, 484.
exchangeable, 34, 345.
fixation, effect of—
lime, 379–387.
microbes, 383.
time, 381.
interactions with sodium, 31.
nonexchangeable, 345.
removal from soil by crops, 347.
requirements of grasses, 81–90.
response of corn, 345–353.
Radioisotopes—
Ca45, 153.
Cl36, 193.
Co60, 273.
P32, 355.
Zn65, 115.
Rhizosphere—
comparison of inner and outer, 263.
microflora of pineapple plant, 259–272.
organisms in, 263.
Root growth, effect of atmospheric humidity, 361–365.
Sodium—
chloride, effect on crop yields, 4–7, 22, 30–32, 54, 78, 84.
content of—
cotton, 26.
various crops, 8–9, 56, 69.
crop response on muck soils, 1–18.
effect on protein and oil of cotton seed, 37.
exchangeable, and crop response, 34, 288.
interactions with potash, 31, 78.
nitrate, response of cotton to, 23, 77.
quality of cotton, 36.
response of crops to, 16, 41–50, 65–74, 91.
yields and composition of cotton plants, 19–28.
Soil series, analyses, descriptions of, or experiments with—
Alexandria, 346; Alloway, 277; Annandale, 117, 276; Ashkum, 407; Athena, 470; Ava, 407; Bellefontaine, 43; Bermudian, 117, 276, 422; Bladen, 436; Bluford, 407; Brenton, 407; Brookston, 346; Cahaba, 31; Carrington, 47, 52; Cashmere, 220; Catalina, 356; Catlin, 407; Chester, 422; Caliborne, 154; Clarion, 127; Clyde, 43, 346; Collington, 117, 276, 422; Colts Neck, 117, 276, 422; Decatur, 144; Douglas, 407; Dover, 422; Drummer, 407; Dunkirk, 146; Dutchess, 117, 276, 422; Elkton, 277; Ephrata, 220; Evesboro, 117, 276, 422; Faceville, 434; Fort Collins, 251; Fox, 422; Freeland, 33; Gallion, 77; Gloucester, 422; Greenville, 434; Hanford, 210, 286; Harpster, 52; Hartsells, 154; Hatchie, 33; Hazen, 117, 276; Hesperia, 181; Hiwassee, 144; Hoosic, 117, 276, 422; Hymon, 33; Ida, 127; Ina, 33; Irvington, 438; Jamison, 33; Kewaunee, 43; Keyport, 277; Lakeland, 77, 434; Lakewood, 117, 276, 422; Lansdale, 422; Lawrenceville, 117, 276; Leavenworth, 220; Leon, 82, 435; Lick, 220; Lintonia, 77; Lloyd, 144; Mahoning, 346; Manatee, 436; Mantachie, 33; Mardin, 66, 379, 481; Marengo, 346; Matapeake, 117, 276; Maumee, 346; Methow, 220; Miami, 43, 47, 346; Montalto, 277; Norfolk, 21, 33, 91, 434; Norton, 117, 276; Ocklocknee, 32; Olivier, 33, 76; Palmyra, 117, 276; Palouse, 469; Papakating, 422; Penn, 422; Plainfield, 43; Poygan, 43; Prentiss, 31; Quincy, 217; Ravenna, 346; Red Bay, 434; Ritzville, 220; Rockaway, 117, 276; Rockdale, 436; Rockport, 117, 276, 422; Romona, 210; Rossmoyne, 346; Russel, 346; Ruston, 33, 77, 434; Sagemoor, 216; Sassafras, 117, 276, 422; Shrewsbury, 277; Springdale, 216, 220; Squires, 117, 276; Superior, 47; Thatuna, 470; Trumball, 346; Ulysses, 251; Varden, 144; Verona, 33; Washington, 117, 276, 422; Wellston, 346; Whippany, 117, 276, 422; Woodstown, 117, 276, 422; Wooster, 346; Yolo, 286.
Streptomycin as bacterial inhibitor, 125.
Structural improvement and soil conditioners, 147.
Sugar beets, yields and salt applications, 12.

Sulfate—
effect of varying levels on yields, 197.
versus chloride on ion absorption, 193–200.
Sulfur oxidation and moisture tension, 251–256.
Water—
air relationships, *see* Air-water relationships.
permeability—
Afghan soils, 371.
in porous media, 239–250.
measurements, 245.
stable structure—
erosion, 393.
factors affecting, 389–397.
vapor, adsorption by soils, 453–465.
Winogradsky, S. N., obituary note, 172.
Zinc—
content of—
plants, 118.
soils, 117.
fixation, effect of—
lime, 117.
phosphate, 117.
status of New Jersey soils, 115–126.
